

Table Number	I have questions about...	I am concerned about...
1	<p>Can we raise taxes to pay for investments instead of rates? Should be more progressive Can we hire the right new leadership? Can we use city of Pittsburgh Capital budgeting?</p>	<p>Where is the new board coming from? Who do they answer to? Ultimately they should be controlled by voters Keep PWSA under mayor and city council so we can affect through voting Like this best but with improvements in health and safety, green infrastructure, living wage employees Keep requirement for Pgh residency for employees!! Important for environment and concern for the system and people.</p>
2		Agree with all
3	Why hasn't PWSA presented to the blue ribbon	<p>Yes yes yes the lack of communications with PWSA</p>
4	<p>How to make this approach to top priority How to keep political bribes from pulling us away from this best option How can we make 20-40 year plans when politicians are a 4-year election cycle? Why is there only one final (answer), there are 3 (primary services/storm water/drinking water/sanitary services) How do we attract and keep first-rate professionals to PWSA?</p>	<p>Can PWSA do what it needs to do? Concerned that this would be a half-hearted effort Who holds PWSA accountable Can they do this with constant changing directors If there's not enough \$, consider implementing more rainwater harvesting and new grey water policies and systems so that much less drinking-quality water has to be produced and transported? How will we find green stormwater projects without a stormwater fee?</p>
5	<p>T&T, Explain government of perp. NPO trust Can the BOD be democratically elected? Term limits?</p>	<p>Training program for employees</p>
6	<p>Who doesn't pay for water? Fair? Equitable to the system? City owned? Non-Profit? Private Corps? Why hasn't city sought funding to replace (full) lead service lines-no partial replacements! More green infrastructure not being used (like rain barrels)</p>	<p>Public needs involvement throughout decision-making process (including committee formations) City losing ANY control of future decision-making of water authority Responsible decisions made for health of community, not for profit</p>
7	<p>Where does the \$4 billion number come from Over what time period What makes private or PPP cheaper-because you have to pay the profit How to make people proud to work for PWSA</p>	<p>Where does the \$4 billion number come from - number being used to scare folks Concerned about the assumption that we can't do it ourselves Our experience w/ velia (a public private venture) did not work great we're gun shy about trying again In PPP or private I am concerned about public input. We need a board in control that is representative of the public Recruiting a really good leader for PWSA PWSA has been a great leader on GI we want that continued and expanded region wide PWSA should partner with Pitt, CMU, and other education institutions Lack of Storm water fee means not everyone paying their share of that (supposed)\$4 billion</p>
9/10	<p>How do we implement cost/water saving methods for city owned property not currently paying a water bill? How do we mitigate/eliminate ronyism in selecting contracts and positions with decision making power? Who would be responsible for appointing the PWSA board? How will the public hold the board accountable if removed from mayoral/city council control</p>	<p>Compensatory residency req's under perpetual non-profit trust Any workers hired must be local and unionized Crating truly sustainable systems and not just the same old junk Implement other cost saving measures now and put that toward infrastructure aka Pittsburgh goats and rain forest Comprehensive affordability plan to help all consumers Time it will take to replace lead lines both publicly and privately Make all consumers responsible for a fair share of consumption (including zoo, etc.) This seems to be the optimal system, water should be publicly managed and owned How do we make this happen?? About the multi-municipality sewershed issue: ALCOSAN rates can be adjusted for individuals, businesses and communities with green infrastructure The public trust and people still have power</p>
11		<p>I like this plan! Does PWSA have skill sets for successful wealth and safety? Can PWSA provide funding for implementation PWSA lacks accountability today</p>
12	<p>Who is bearing brunt of increased costs? What about low-income folks who can't do that? Are our city's compensation requirements competitive with other cities of our size? What are they doing Did city control mess up the PWSA? If so, how does this plan address that? How would the new board be better than the current board? Accountability</p>	<p>Implementability: We have political will now, what could happen down the line? This plan seems to be an effort to avoid confronting the problems of gov oversight mgmt. Accountability</p>
13	<p>Who appoints the board? How to assure diversity and rate payer representation on the board? How does this model enable taking advantage of local talent? Can this model address the lead remediation challenge?</p>	<p>Quality workforce development City residency required Ability to innovate with green infr. and other new technologies; efficiency incentives Ability for everyone to afford-need rate payer assistance Ability to hire enough employees</p>
14	<p>Perpetual non-profit trust, what is this? How PWSA board is chosen?</p>	<p>Anything that operates like UPMC Hiring engineers in a climate of mega engineering firms Everyone paying their fair share. Non profits need to be paying for infrastructure-their water and sewer rates need to reflect that. Storm water charge for imervious surfaces!</p>
19		<p>I like perpetual non-profit trust guarantees no privatization Prioritize most urgent waterver the cost City should still have oversight</p>
20	<p>Public or private the costs of repair the systaisth save? Better affordability programs? Why does the summary for strategy A sound bias against staying public? What is a () non-profit trust? Rates one going to go up no matter what? So why should more \$\$\$ go to print copy?</p>	<p>I want a publicly accounted system Commonwealth funding The summary seems to stack the problems as being more onerous if done internally. If all of these problems exist regardless of the solution chosen in the end</p>
21	<p>How will board governance change Re lead (and also, perhaps leaks): I'm intersted in the epoxy-lining process and initiative shown by PWSA in testing this out. I woud love</p>	<p>Can we continue to get in some short-term people with hands on experience, to bring in ideas without becoming part of the structure, or having ownership? Mayoral influence over the board PUC oversight Raising \$\$\$</p>
